Environmental Risk Management and Prevention

Transparency and Community Engagement

Ongoing Commitment

Purpose and Scope

Hotel Puchet, located in Sant Antoni de Portmany (Ibiza), declares its commitment to sustainability, circularity and the protection of the natural and social environment in which it operates. This policy covers all our activities, from accommodation and food and beverage management to internal operations, relationships with suppliers and the experience of our guests.

Its scope extends to all levels of the organisation, including team members and the value chain, with the aim of moving towards a circular, responsible and resilient tourism model.

Regulatory Compliance and Continuous Improvement

We comply with all applicable environmental regulations at local, regional, national and European level, including measures relating to the sustainability and circularity of tourism in the Balearic Islands and other provisions in force regarding waste, energy efficiency and climate change.

We are also committed to continuous improvement, periodically reviewing our environmental objectives and indicators in order to reduce our ecological footprint.

Guidelines of Our Environmental Policy

Energy Efficiency and Promotion of Clean Energy

We are committed to continuously improving our energy performance by optimising processes and using energy-saving technologies. We promote the use of sustainable energy sources, convinced that a responsible energy transition is key to environmental wellbeing.

Responsible and Efficient Water Management

We regard water as a valuable and limited resource. We therefore promote its efficient use through reuse systems, low-consumption technologies and practices that reduce waste. Our objective is to minimise the water impact of our operations, ensuring the rational, controlled and sustainable use of this resource.

Waste Reduction

We are committed to reducing waste generation at source, prioritising the use of reusable, recyclable and biodegradable products across all our operations. Through our waste management plan, we work to minimise the environmental impact of our activities, promoting reuse and recycling as pillars of responsible management of the materials we use.

Culture of Continuous Environmental Improvement

We take a dynamic and proactive approach to improving our environmental performance by setting measurable targets and reviewing them periodically. We believe that innovation, ongoing training and technological updates are essential to remain a benchmark for sustainability within the hotel sector.

Environmental Risk Management and Prevention

We proactively identify and manage potential environmental risks arising from our activities. We are committed to preventing, minimising and, wherever possible, eliminating any form of pollution by implementing the measures required to protect the environment. This approach enables us to act effectively and adapt with resilience to current and future environmental challenges.

Transparency and Community Engagement

Hotel Puchet encourages open and honest communication about its environmental actions, facilitating the participation of employees, guests and suppliers. We will publish our progress periodically and keep this policy accessible to all interested parties.

Ongoing Commitment

Hotel Puchet embraces sustainability as a strategic pillar of its management. This policy represents our firm commitment to protecting the environment, regenerating the local area and safeguarding the wellbeing of future generations, actively contributing to more conscious, circular and resilient tourism in Ibiza.
